What operating systems can I use with GoFiler?

Last Modified on 07/14/2026 1:28 pm EDT

GoFiler is a Windows application that is supported on current Windows operating systems.

Our support for GoFiler matches the Microsoft Lifecycle Policy for their operating systems. The GoFiler suite may still run on operating systems passed their end of life (as determined by Microsoft's policy). However, Novaworks will not provide support or assistance for problems that may arise due to using such operating systems.

GoFiler can run on a personal computer running Windows 10, Windows 11, or Windows Server 2008R2 or later. Please note that while GoFiler can run on older versions of Windows, only those versions of Windows that are currently supported by Microsoft are supported by the Novaworks development and technical support teams.
